

The impact of uterine health conditions on mental health

For people with uterine health conditions, **many things can negatively impact mental health**

~60-80% of people with endometriosis

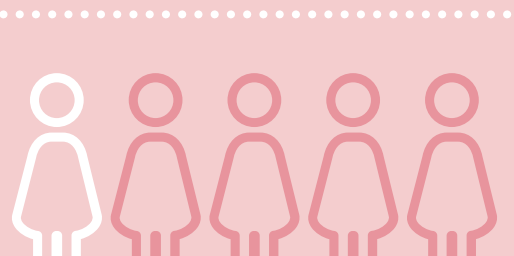

and

~25-50% of people with uterine fibroids

have symptoms like pain and heavy bleeding^{6,7}

Stigma can cause shame or embarrassment, making it hard to talk about periods⁸

~1 in 5 women do not feel comfortable talking about periods with their healthcare provider⁸

Nearly 60% of people with endometriosis have **felt they were not taken seriously by their healthcare providers⁵**

Black women are more likely to have their pain dismissed than white women⁹

These conditions can worsen mental health^{1,10}

Compared to those without, people with uterine health conditions may be at higher risk of developing anxiety or depression^{1,10}

Fortunately, there are resources that can help...

Learn how to **talk to your healthcare provider and find support**

Check out the **Uterine Health Guide** for information on uterine health and women's health advocacy groups

Seek out organizations that can **help you improve your mental health**

National Alliance on Mental Illness (NAMI)

Mental Health America (MHA)

You are not alone. The right education and support can help you live your best life.

*Medical gaslighting is the dismissal or invalidation of a person's medical concerns by a healthcare provider.⁴
